

Quiz 2 : Notes Submission

14/7/22

When finding a research paper for information, it is important to do the following-

1. One must be specific to the topic they are looking for, to get the best possible results.
2. The people who have been accountable for publishing the research paper must be cited in the acknowledgements.
3. If the specific topic is not found, nearby topics may be taken as reference points to draw conclusions or find assistance in your own paper.

There are 4 common types of bias in researching-

1. Publication Bias - Significant/positive results are more likely to be published, while less significant results, or null results, are ignored.
2. Reporting Bias - Omitting or hiding undesirable/non-significant results
3. Confirmation Bias - Results are amplified or ignored to fit expectations, usually political or economic.
4. Recall Bias - Events/exposures are misremembered and not published properly.
